GRADING OUR GOVERNORS: A REPORT CARD ON REOPENING STATES’ ECONOMIES

EXECUTIVE SUMMARY

Note: This scorecard is subject to change on a daily or week-to-week basis based off of the decisions made by governors as they decide to safely and responsibly reopen their economies.

This report grades the nation’s governors on how they have, and are continuing to, respond to the coronavirus. Taking into account the severity of the virus in each state and the need to keep their citizens safe and healthy, we assess how measured or damaging their actions have been with respect to safeguarding the economic well-being of their citizens. We examine lockdown orders, business closures, hospital and outdoor activity orders, and the degree of punitive actions on enforcing these measures. Most importantly, we measure the start dates for reopening in each state as the evidence is very strong that states with late start dates will have much more severe recessions than states that open earlier.

The premise of this report is that – with a few exceptions in some metropolitan areas – the time is long past for every state to reopen safely, smartly, and judiciously so as to end the economic destruction and despair from lockdowns. Millions more Americans will be pushed into unemployment lines, plunged into poverty, and lose their businesses – forever. State revenue losses will be severe and continued shutdowns will require dramatic cutbacks in state and local services for lack of money. Even from a public health standpoint, the very negative effects from job loss, poverty, business failure, and so on are causing social pathologies to soar – suicides, depression, stress, heart attack, spousal and child abuse cases, drug overdoses, alcohol abuse, financial ruin, and deprivation.

The governors who get an A grade for protecting their economies from devastation are: Jared Polis of Colorado, Ron DeSantis of Florida, Brian Kemp of Georgia, Kim Reynolds of Iowa, Pete Ricketts of Nebraska, Kevin Stitt of Oklahoma, Kristi Noem of South Dakota, Bill Lee of Tennessee, and Mark Gordon of Wyoming. The governors who get an F and have put their governors in most economic peril are Phil Murphy of New Jersey, Tom Wolf of Pennsylvania, Ralph Northam of Virginia, and Tony Evers of Wisconsin. California Governor Gavin Newsom of California received a D grade, Andrew Cuomo of New York a C grade, and Texas Governor Greg Abbott of Texas a B grade. The worst performing Republican governor was Larry Hogan of Maryland who received a D grade.
HOW GOVERNORS HAVE RESPONDED TO THE CORONAVIRUS

The highly contagious novel coronavirus has killed more than 70,000 Americans and has caused major illness to hundreds of thousands more Americans (as of this writing). The impact of this pandemic on the health of the American people has been severe and has frightened the American public like few events of modern times.

The other major impact of the pandemic has been the lightning bolt dealt to the American economy. As a result of lockdowns to businesses and workers advised by the president and put in place by the state governors, some 25 million to 30 million Americans have been placed in unemployment, millions of businesses from coast to coast have gone bankrupt, and nearly $4 trillion has been spent at all levels of government to combat and contain the virus. The latest estimates are predicting a decline in American output (GDP) will be between 25 and 30 percent of our GDP when all is said and done. Even the Great Depression didn’t cause this rapid meltdown in the American economy.

Fortunately, the number of reported cases and death rates are slowing. The curve appears to have flattened and even declined - hopefully for good.

From the start, the 50 governors of the United States have taken a lead role in terms of how they locked down their economies and how strictly they enforced “stay-at-home” orders and business closures. The response differed widely from state to state, with some - such as Arkansas and Nebraska - never having issued stay at home orders or very modest ones, and others - like California and New Jersey - issuing penalties, fines, and in some cases even jail for breaking curfews and lockdowns. Every governor (sometimes in consultation with state legislators and commissions) defined “essential” from “non-essential” businesses. Essential businesses stayed open – in some cases with restricted entry and hours of operation – and non-essential businesses required to stay shuttered.

In this report, we assess how the governors have handled the shutdowns in terms of measuring how restrictive and damaging governors’ edicts have been when it comes to their state’s economy. This isn’t just a rearview mirror assessment of the damage done to jobs, businesses, and state revenues and debt over the last two months.

Much more importantly, President Trump has correctly granted authority to the individual governors to decide when they open up for commerce and how they do it. These decisions that governors are making right now in terms of how and when to open up their economy - when businesses can open, when restaurants can start taking customers, when schools, hospitals, and sports can start up again, etc. - will have a profound impact on which states recover from the deep recession quickest and how soon workers will get back into jobs.

We already are seeing very marked divergent patterns among the governors. For the most part, the more pro-business states in the south, the southwest, and the mountain states have begun lifting restrictions more quickly. The more liberal states of the northeast, the west coast, and the Midwest have been more reluctant to lift lockdown orders.
It may not seem of much consequence whether a state has opened in April or a governor like Ralph Northam has decreed that the Commonwealth of Virginia will stay closed down to the middle of June. But the start date emphasized in this study matters a lot. A recent study by Laffer Associates finds that states that open up earlier will have substantially better economic recoveries than states that stay closed for another month or so.¹ That study finds that early opening states could be in recovery by the end of the Summer of 2020, while the laggard states could be in recession for six months or more. This is because businesses, stores, shopping centers, restaurants, and office parks are much more likely to fail if their doors aren’t opened sooner rather than later. Every day counts.

Another factor to take into account is the cross border migration of businesses and workers. It has been long-established that businesses, factories, people, and workers move to places that are business-friendly and “where the jobs are.” The movement of about 3 million to 4 million people from blue states to red states may accelerate if blue states are way behind red states in opening and continue to tilt economic and political power to the states like Florida, Georgia, Texas, Tennessee, and Utah.

We believe that every governor is making a good faith effort to weigh the risks of the health of their citizens versus the economic wellbeing of their state. No governor wants to impoverish their citizens. No governor wants to see any of their citizens get ill or even die. In this study, we don’t get into the motives of governors – we assume their motives are pure. But these decisions they are making today will have long-lasting consequences for the economic opportunities and the prosperity of their citizens for many years to come.

We also flatly reject the claim made in the media and by some politicians that governors that want to open up their states for business are putting greed, profits and business over saving lives. This is, and has always been a false narrative – a Sophie’s choice that never has existed. The reality is that there are very negative health consequences to economic lockdowns and “stay-at-home” orders.

We acknowledge and take into account in this report card that some governors are governing states that have been heavily impacted by coronavirus. A lockdown in those states may make a lot more sense than in other areas with low population density with few infections. The chart below shows the percentage of deaths as a share of population by state.

The chart shows that coronavirus has spread very unevenly – in New York City and its suburbs, including parts of New Jersey and Connecticut, there was a genuine acute crisis that tested health system capacity. In most of middle America we had the opposite crisis – empty doctors officesemergency rooms while non-COVID-19 patients were not seeking treatment under the misimpression that the hospitals were overwhelmed.² The crisis in New York peaked about three weeks ago, and now governors across America are wise to start up their economic engines and bring an end to the massive economic hardship that has been and continues to be imposed on Americans.

We have divided the states into four tiers to consider the severity of the disease threat relative to state lockdown policies. The high severity states have more than 100 deaths per million population as of April 27, medium severity 30 to 99 deaths per million, and low severity less than 30 deaths per million.

The premise of this report is that there must be appropriate urgency to the task of reopening the country, because there are significant direct and indirect health and economic consequences of delay.

The direct consequences come from failure to provide non-COVID health care.

Even the New York Times, which stoked as much coronavirus panic as anyone, now admits: “ERs have about half the normal number of patients, and heart and stroke units are nearly empty, according to doctors at many urban medical centers. Some medical experts fear more people are dying from untreated emergencies than from the coronavirus.”³

Cancer care has also largely been suspended. The consequences of that over the next several years could be enormous. “The number of deaths due to the disruption of cancer

services is likely to outweigh the number of deaths from the coronavirus itself over the next five years,” predicts Richard Sullivan, director of the Institute of Cancer Policy at King’s College London.4

The indirect health consequences come from economic devastation. Skyrocketing unemployment will lead to rampant substance abuse, domestic violence, suicide, drug overdoses, and other severe public health harms. This slide comes from professor Greg Mankiw’s Harvard lecture on the subject:5

As the Laffer study and others show, supply chains are beginning to break down, and every day of closure now risks going from a severe depression to a complete economic collapse. Economic opening can be done with mitigation measures to limit the risk of a major outbreak, but in the vast majority of America hospitals are empty, not overwhelmed, meaning the balance of risks is clearly in favor of opening as quickly and aggressively as can be done compatible with best hygiene and health-conscious practices – such as social distancing at the workplace and in stores, gloves, masks, disinfectants, testing, screening, and so on.

This report assesses how well each governor is responding to this increasingly undeniable reality that America faces an urgent imperative of limiting the health and economic catastrophe caused by lockdowns. Those who don’t agree with that assessment are free to discard these grades. Those who do should pay careful attention to how their governors are performing.

This report also has a utility to those who are looking to relocate or start up a business, or store or restaurant – or those who are thinking of investing in commercial real estate or buy a home in one state versus another. This would not be a good time to start a business in New Jersey or Connecticut. Florida’s real estate boom will be enhanced.

We have given each governor a score based on the extent to which they are banning economic activities, restricting individual freedom of movement, and failing to provide a clear timetable around which citizens and businesses can plan. We considered the extent of the virus threat in each state to calibrate expectations by separating them into three tiers – high, medium and low death rates from the coronavirus. We also take into account specific actions that governors have taken rightly or wrongly in response to the virus that have impacted their state’s economy.

Example: Unemployment and social problems

<table>
<thead>
<tr>
<th>Each one-percentage-point increase in the unemployment rate (≈ percentage of the labor force that is unemployed) is associated with:</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ 920 more suicides</td>
</tr>
<tr>
<td>▪ 650 more homicides</td>
</tr>
<tr>
<td>▪ 4,000 more people admitted to state mental institutions</td>
</tr>
<tr>
<td>▪ 3,300 more people sent to state prisons</td>
</tr>
<tr>
<td>▪ 37,000 more deaths</td>
</tr>
<tr>
<td>▪ increases in domestic violence and homelessness</td>
</tr>
</tbody>
</table>

Source: The Deindustrialization of America

The governors with A and B grades are already moving to restore freedom and opportunity, and trusting individuals to follow best practices or isolate themselves based on their own risk assessments. The D and F grade governors continue to arbitrarily ban activities without respect to any sensible risk versus benefit calculation – and are therefore taking the largest risk of all – the risk of catastrophic economic collapse.

GOVERNORS PLANS TO REOPEN STATES

ALABAMA: B

“If the government kills a business, the government can’t print enough money to bring it back to life,” Gov. Ivey said.

“Alabama’s stay-at-home order expired on April 30. Gov. Kay Ivey (R) plans to follow state task force recommendations, which include first allowing small retailers, restaurants and other businesses to reopen with protective measures in place”\(^6\) (The Hill)

- # of deaths per million: **37.3**
- # of Unemployment claims: **249,685**
- Unemployment increase: **2925.07%**
- Stay-at-home expiration date: **April 30, moves to “safer-at-home” order**
- Reopening businesses:
  - elective procedures: **April 30**
  - non-essential: reopened 5pm April 30, retail at 50% capacity, beaches
  - restaurants: **takeout only**
- Governor: Kay Ivey
- Party Affiliation: Republican
- Sworn In: April 10, 2017
- State Risk Tier Level: Medium

ALASKA: B

“Alaska’s stay-at-home order is set to expire April 21. Gov. Mike Dunleavy (R) announced April 15 that nonessential medical procedures could restart May 4”\(^7\) (The Hill)

“Gov. Mike Dunleavy announced on Tuesday that restaurants and other retail businesses can begin offering more services on Friday, if they follow certain health guidelines. Anchorage businesses will be opening three days later, on Monday, according to Dunleavy”\(^8\) (KTOO)

- # of deaths per million: **12.3**
- # of Unemployment claims: **39,624**
- Unemployment increase: **1366.47%**
- Reopening businesses:
  - elective procedures: **May 4**
  - non-essential: April 24 retail at 25%; personal care services at 1:1 employee-to-customer ratio

• Reopening businesses:
  · elective procedures: April 27
  · non-essential: April 30 for gyms; May 1 for personal care services
  · restaurants: May 11 at 33% capacity
• Governor: Asa Hutchinson
• Party Affiliation: Republican
• Sworn In: January 13, 2015
• State Risk Tier Level: Low

CALIFORNIA: C → D

*SCORE CHANGE*

- Six indicators that are driving California’s decision to gradually modify portions of the state’s stay-at-home order: 11 (gov.ca.gov)
  - Expanding testing and contact tracing to be able to identify and isolate those with the virus;
  - Preventing infection in people who are most at risk;
  - Being able to handle surges in hospitals and the health care delivery system;
  - Developing therapeutics to meet demand;
  - Ensuring businesses, schools and child care facilities can support physical distancing; and
  - Determining when to reinstate certain measures like the stay-at-home order if need be.
• # of deaths per million: 32.4
• # of Unemployment claims: 2,107,854
• Unemployment increase: 1693.91%
• Reopening businesses:
  · elective procedures: April 22
• Governor: Gavin Newsom
• Party Affiliation: Democrat
• Sworn In: January 7, 2019
• State Risk Tier Level: Medium

COLORADO: A

“The state’s stay-at-home order is set to expire April 26. Colorado Gov. Jared Polis (D) has said social distancing measures will remain in place until “scientists are able to deliver a truly effective clinical treatment” for COVID-19. He said Monday that after April 26, the

state would enter a “safer at home” phase where residents are recommended to stay home but not required to” (The Hill)

Colorado will require all nursing homes and assisted living facilities to submit plans by May 1 on how they’ll keep residents safe. (CPR News)

The Mesa County Board of Commissioners sent Gov. Polis a letter and a draft plan for re-opening its businesses during the coronavirus pandemic. County Commissioner Rose Pugliese said the proposal has several stages and it still requires many safety measures, like social distancing and the encouragement of work telecommuting. (CPR News)

- # of deaths per million: 83.9
- # of Unemployment claims: 219,565
- Unemployment increase: 3360.60%
- Reopening businesses:
  - elective procedures: April 27
  - non-essential: April 27 retail open for curbside; May 1 retail open for in-store customers and personal services; May 4 nonessential offices open to employees with staffing less than 50%
  - other: some counties stay-at-home until May 8
- Governor: Jared Polis
- Party Affiliation: Democrat
- Sworn In: January 8, 2019
- State Risk Tier Level: Medium

CONNECTICUT: D

“Connecticut’s stay-at-home order expires May 20. Gov. Ned Lamont (D) has set up an advisory board to decide how to reopen the state. Connecticut is allied with Delaware, Massachusetts, New York, New Jersey and Rhode Island in a multistate effort to coordinate reopening” (The Hill).

On the 23rd of April, Gov. Lamont announced members of the Reopen Connecticut Advisory Group. (portal.ct.gov) He then posted to his Twitter “I’m as anxious to reopen our economy & get back to business as everyone else, but we need to do it in a thoughtful way.”

- # of deaths per million: 399.1
- # of Unemployment claims: 170,271
- Unemployment increase: 1285.56%
• Governor: **Ned Lamont**

**WEST VIRGINIA: D**

“Governor Jim Justice (R-WV) is lifting the West Virginia stay-at-home order and moving towards ‘safer-at-home’ approach. The stay-at-home order will be lifted on Monday, May 4, 2020. The governor’s plan includes the reopening of small businesses with fewer than 10 employees, barber shops and dog groomers. As for restaurants – inside dining is still not allowed, but outdoor dining services are.” (WVNS)

• # of deaths per million: **14.5**
• # of Unemployment claims: **75,689**
• Unemployment increase: **2451.57%**
• Stay-at-home expiration date: **in place indefinitely**
• Reopening businesses:
  • elective procedures: **April 28 hospital elective procedures; April 30 other outpatient health care providers**
  • non-essential: **May 4 (expected) for small businesses (less than 10 employees) and professional care services**
  • restaurants: **May 4 (expected) for outdoor dining (with social distancing)**
• Governor: **Jim Justice**
• Party Affiliation: **Republican**
• Election year: **January 16, 2017**
• Quote- “we want to get back to work, but we want to do so as prudently as we possibly can.”
